Published on 19 Apr 2020, 21:08 IST To be able to play Garena Free Fire, you need an Android device with the following features, similar or better according to Garena's website: Mediatek MT6737M quad-core (1.1GHz) or a similar power processor GPU Mali 400 or similar. 1GB RAM 8GB internal memory android nougat 7.0 But the official download from Google Play warns us that the minimum version of the operating system is Android 4.0.3, so you can probably play if you have a version. Anyway, keep in mind that the minimum and recommended technical requirements are different. So the more powerful the device is, the better and smoother the game will last. But if you want to run it on your computer via an emulator (we always recommend BlueStacks), you will have to perform the following Windows 7 or later. Intel or AMD processor. At least 4 GB of RAM. 5 GB free hard drive. Make sure that the user account where you install it is a computer administrator account. Updated graphics drivers. As always, speaking of an emulator or virtual machine, the more powerful the computer specifications are, the better and smoother The BlueStacks will work, and the better the game performance. Remember that android emulator allows you to also install a number of additional tools to make your experience garena free fire even better. If your computer meets all of the above requirements, you can enjoy it without any problems. Garena's Free Fire is one of the most played mobile games at this point. The game is constantly competing with PUBG Mobile and Fortnite for the top spot in the battle royale genre. Aside from attracting a number of gamers, the game is also great for the streaming community. TotalGaming and TypicalTard are some streaming platforms that have made a huge name for just streaming Free Fire.While Free Fire is a mobile game and gamers can stream it to mobile, streaming long hours of mobile is a very difficult task. This is why many streamers prefer to stream a computer or laptop on a mobile device instead. If gamers are interested in playing Free Fire on a PC or Laptop, multiple emulators are available online, which can run the game successfully. Although the game doesn't require a top-notch PC or laptop to play, it still requires proper setup. Pc minimum requirements for the game are as follows -Minimum Requirements For Free Fire PCOS: Window 7,8,10, 64bitCPU: Core i3 2.4GHzRAM: 4GBGPU: Intel HD Graphics 4000HDD: 4GB Recommended setup free fire PCOS: Window 7,8,10, 64bitCPU: Core i5 2.8GHzRAM: 8GBGPU: NVIDIA Geforce GTX 660HDD: 4GB You can download free fire just by heading over garena's official website. Download the Free Fire setup and then open the setup to start installation. After installation ends, open Garena's Free Fire app and enjoy the game. Other alternatives are the GameLoop emulator and BlueStacks. GameLoop is one of the most popular emulators right now running mobile games for PC. In addition to Free Fire, it can also run PUBG Mobile and COD Mobile.The emulator can be downloaded from GameLoop's official website. Blue Stack is another option and similar to GameLoop, it can run most mobile apps on a PC. Published December 15, 2019, 21:07 AM Prev Add Controls By Default. Garena Free Fire is only available on Android and iOS mobile devices, but you can also run it on your PC via an Android emulator called BlueStacks. In this chapter we have described the system requirements for different versions of the game - Android, iOS and PC via BlueStacks. Minimum system requirements - PC versionBlueStacks to start and then Garena Free Fire, you must meet the following hardware specifications:Operating System: Windows 7/8/10 (32 and any dual-core processor with at least 2GHz frequency RAM: 2GBVideo card: Intel HD Graphics 3000 (requires DirectX 11 compatible cards). HDD / SSD: about 4 GB of free spaceNote: The above system specs allows for relatively convenient gameplay, but there may be some frame rate from the drop-down menu from time to time, so it's worth bearing with this in mind. Recommended system requirements - PC version To enjoy smooth gameplay Garena Free Fire, without risking any performance issues, you must meet the following system specifications:Operating system: Windows 7/8/10 (32 and 64bit)Processor: Intel Core i5-680 / AMD FX 6300 - this is recommended to enable processor function virtualizationRAM: 6GBVideo card: HD Intel 5200 (requires DirectX 11 compatible graphics card). HDD / SSD: about 4 GB of free spaceNote: as you can see, emulator itself, as well as the game does not have high system requirements and even low-profile hardware should be enough to play Garena Free Fire System requirements - iOS and Android platformsThe game has no specific requirements for mobile devices. On Android devices, the game requires Android OS version 4.0.3 or later. Apple devices must have iOS version 8.0 or higher to start the game. The device should have at least 1.1 GB of free space. It is also recommended that there is at least 2GB of RAM. Prev add Controls Free Fire is the most battle royale game in the mobile world because the game is lightweight and can be played on all kinds of low-end mobile devices. The game also has a unique character system with pets that make it stand out from other battle royale games. Free Fire can be played on PC if you have an emulator Free Fire can also play on a PC like PUBG Mobile as long as you have an emulator. Here's everything you need to know to run Free Fire PC including Free Fire PC size, minimum requirements, best emulators. ContentsFree Fire has an initial size of 500 MB, but you will also have to download other data such as updates, maps, skins,.... etc, which can increase the total game file Free Fire up to a significant amount. The total size of Free Fire is about 1.6 GB. Free Fire PC Size is about 2 GBBut play Free Fire PC, you need an Android emulator as well as run APK files. It takes about 300 MB more of your storage space, which means you need at least 2GB of free storage to play free fire on your pc.2. Free Fire PC minimum requirementsFree Fire was built on low-end mobile devices so the graphics game is lightweight and easy. However, when playing Free Fire on pc, you have to use an emulator to run and the requirements for each emulator are different. Emulator is a software that tries to behave like complex hardware, making it difficult to develop a work emulator and they work really slow your pc and require more hardware than usual. Here are the minimum requirements for some of the most emulators. Free Fire PC Bluestacks Minimum REQUIREMENTS FOROS: Microsoft Windows 7 and above. Processor: Intel or AMD Processor.RAM: Your computer must have at least 2 GB of RAM. (Note that having 2GB or more of disk space is not a substitute for RAM). HDD: 5GB Free Disk Space.You must be an administrator on your computer. Up-to-date Microsoft or chip tone image vendor graphics drivers. Free Fire PC Nox players minimum requirements for Windows XP(32) SP3/Windows 7 (32 or 64 bits)/Windows 8 (32 or 64 bits)/Windows 10. AMD Dual Core Processor or Intel CPU (virtualization technology (VT-x or AMD-V) support preferred). At least 1.5 GB of RAM. GPU OpenGL 2.0+ support. At least 1.5 GB of free disk space under the installation path (for storing data from the apps/games you are installing) and 300MB under the system disk. Free Fire PC Memu Play Minimum Requirements66x66. 64 Processor (Intel or AMD CPU)/WinXP SP3 / Win7 / Win7 / Win7.1 / Win 10.Windows DirectX 11 / Graphic Head OpenGL 2.0.Hardware Virtualization Technology (Intel VT-x/AMD-V) is enabled in bios. At least 2GB of system memory. At least 2GB of hard disk free space. Free Fire PC GameLoop Minimum RequirementsCPU: Dual-core Intel or AMD at 1.8 GHz.GPU: NVIDIA GeForce 8600/9600GT, ATI/AMD Radeon HD2600/3600.Memory: at least 3GB OF RAM. OS: Windows 10, 8.1, 8 and 7.DirectX: Version 9.0c.Storage: 1GB free storage.3. Free Fire Best Emulators You need an Android emulator on your PC to play Free Fire and here are the best options for you. Each emulator has its own perks so you have the freedom to choose which one that suits you most depends on the specs of your computer. BluestacksBluestacks is one of the oldest and one of the most popular Android emulators. This was actually the only option for android emulator years ago. It's still a great emulator now, but it's no longer the best anymore. Bluestacks are actually more suited to mid-to-high-end computers for a smooth playing experience. Free Fire PC download size is pretty big too. Bluestacks are always a sure choice Bluestacks are free to download from their official website. But from time to time, it installs a random mobile app on your PC. Nox Player Overall Nox Player is currently the best Android emulator on the market right now with high performance and compatibility. The emulator gives you the endless ability to customize yourself. The app is easy to use for random users in default settings if you don't want to spend too much time on it. Also Free Fire PC Size Nox Player is smaller than Bluestacks.NoX Player is the best Android emulator in generalNoX Player is free to download from its official website and the same Bluestacks, an app to install random mobile applications on your PC Once in a while or make you watch ads. GameLoopGameLoop has been developed by Tencent to launch PUBG Mobile PC so it's kind of a great choice for Free Fire as well. Performance GameLoop is smooth and it is super easy to use already optimized key mapping to play Free Fire. GameLoop is a free download, but it doesn't have ads or forces you to download random apps to your PC, which is a big plus. You can play Free Fire using GameLoopMemu Play The biggest reason why you should choose Memu Play is that it is the best Android emulator on a low-end PC. The requirement is very low because you do not need a dedicated GPU launch. This is your best choice if you are playing on a low-end PC or laptop. Free Fire PC Size Memu Play is also smaller than other emulators. Memu Play is a free download from your website. Memu Play is the best Free Fire emulator for low-end PC>> Also check out: Free Fire: How to design your stylish name with ease
